Quiz 11 on Task: Cart creation
July 20, 2018

Name: Yuta Nemoto
ID: 51240234

1. What kind of functionality does a shopping cart implement?

Database to keep the content of cart
Unique identifier, cart.id, in the session needs to be stored.

2. What is the hook method for?

It's for ensuring that it's not referenced by any line item.

It's called automatically before Rails attempts to destroy a row in the database and if it returns false, the row will not be destroyed.

3. What is wrong with the shopping cart we have created?

After creating a cart and reloading the page, it shows the separate lines for the same product when the product line once with a quantity of 2.
It's different for Real shopping carts.
