Screenshot: Creating new Product

The screenshot shows a web browser window with the address bar at `localhost:3000/products/new`. The page title is "New Product". The form contains the following fields:

- Title:
- Description:
- Image url:
- Price:

Below the fields are two buttons: "Create Product" and "Back".

Screenshot: Validation activated and shows error when the particular field is blank.

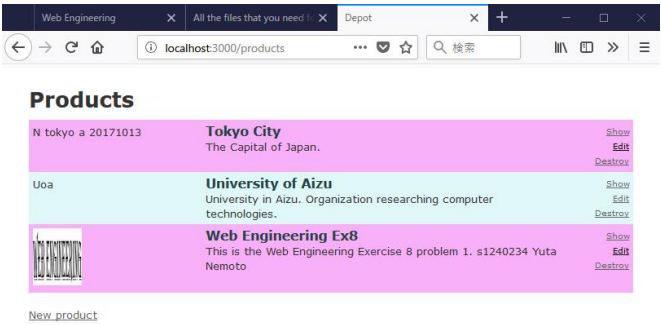

The screenshot shows the same "New Product" form, but with a red error message box at the top:

5 errors prohibited this product from being saved:

- Title can't be blank
- Title is too short (minimum is 10 characters)
- Description can't be blank
- Image url can't be blank
- Price is not a number

The form fields are now outlined in red, indicating they are required. The "Create Product" and "Back" buttons are still present at the bottom.

Screenshot: List of Products

Screenshot: Validation is active in editing page also.
